SEMPRA ENERGY — DATA MIGRATION PLATFORM

EXECUTIVE EDITION

Executive Showcase & Non-Technical User Guide

A complete visual guide to 3-cycle data validation, automated reconciliations, and leadership reporting.

1. Executive Overview — What This Platform Solves

During large-scale SAP data migrations, leadership requires instant visibility into whether **100% of data from legacy systems was correctly extracted, migrated, and loaded into the target SAP system**. Traditionally, this requires teams of analysts spending several hours manually cross-referencing massive Excel sheets with VLOOKUPs.

This platform replaces that entire manual process with an **instant, automated, interactive executive dashboard** that consolidates all 3 Migration Cycles (DM1, DM2, DM3) into a single screen with real-time health indicators.

■ 10 Seconds	■ 7,700+ Tables	✔ 100% Automated
Full 3-Cycle Sync Time (Was 3+ Hours)	Reconciled End-to-End per Cycle	Zero Manual Calculation Errors

2. Real-World Business Examples (How It Works in Practice)

Here is how a manager or project lead uses the dashboard for everyday decision-making:

Scenario A: Morning Executive Briefing in 3 Clicks

The Challenge: Management needs an update on whether DM1, DM2, and DM3 datasets have been successfully refreshed.
The Solution: Open the master dashboard and click **'■ Auto-Sync All Cycles'**. In under 10 seconds, all 5 reference and migration logs are scanned, validated, and visually summarized with clear green/amber health gauges.

Scenario B: Spotting Record Discrepancies Instantly (Source vs. Target)

Example Table: /1CADMC/00000239 (Customer Master Extension)
• **Source System Count:** 12,098,214 records
• **Target SAP Count:** 12,098,148 records
• **Dashboard Result:** Automatically tags this table as **'▲ Source is more (+66 records)'** with an amber highlight.
• **Action:** The manager clicks on the table row to view full details or exports a clean Excel list for the migration team to review.

3. Interactive Circle & Pivot Breakdown

When drilling into any cycle, leadership can switch to the **'■ Src vs Tgt Pivot / Circle'** view for an executive visual breakdown:

Status Category	Color Indicator	Business Meaning	Manager Action
✔ Matching	Green	Source and Target counts match 100% (Diff = 0).	Ready for sign-off.
▲ Source is More	Amber	Source has extra records not yet reflected in Target.	Filter out and share with ETL leads.

▼ Source is Less	**Blue**	Target system contains additional created records.	Review configuration/initialization records.
— N/A / Missing	**Grey**	Table not in current cycle scope.	No action required.

4. How to Use the Dashboard in 3 Simple Steps

Step 1: Launch	Open Sempra_CrossCycle_Summary_MASTER.html in any web browser (Chrome, Edge, etc.).
Step 2: Sync	Click the **'■ Auto-Sync All Cycles'** button at top left. The dashboard automatically scans all cycle files and updates all charts.
Step 3: Review & Export	Click on any number (e.g. **7,710**) to inspect individual tables, switch to the **Circle/Pivot View**, or click ■ **Excel** to export audit-ready spreadsheets.

5. Summary of Business Benefits for Sempra Leadership

• **Full 3-Cycle Governance:** Track DM1, DM2, and DM3 side-by-side to observe cycle-over-cycle data quality improvement.

• **Audit-Ready Compliance:** Generates timestamped PDF, Excel, and CSV deliverables for steering committees and compliance sign-offs.

• **100% On-Premise & Secure:** Runs locally inside Sempra's secure environment with zero external cloud dependencies or licensing fees.

• **Intuitive for Non-Technical Users:** Clean color-coded gauges and single-click drill-downs allow any stakeholder to verify data migration health in seconds.
