Sempra Data Migration Dashboard

Complete User Manual

Odyssey Phase 1 Project Team

Version 1.0 · October 2026 · DM1 · DM2 · DM3

---

1. Overview & Purpose

The **Sempra Data Migration Dashboard** is a local web application built to track, analyse, and report on SAP data migration progress across three migration cycles — DM1, DM2, and DM3 — as part of the Odyssey Phase 1 project.

What the tool does

- **3-Cycle Tracking** — Track DM1, DM2, DM3 migration progress in one place with automatic cross-cycle comparison.
- **Table Reconciliation** — Automatically matches reference tables against exported/imported data to identify gaps.
- **RAG Status Reports** — Business-friendly Red/Amber/Green scorecards for each migration cycle.
- **Auto Column Detection** — Reads Excel files regardless of column name variations — no template required.
- **Drill-Down Analysis** — Click any table or metric to see individual record-level detail.
- **SAP Live Connection** — Optionally connects to SAP source and target to pull live record counts automatically.

---

2. System Architecture

The dashboard runs entirely on your local machine — no cloud, no external server required.

Component	Port	Purpose
Static HTTP Server	5003	Serves HTML dashboard files to your browser
File Watcher Bridge	5002	Reads Excel files from disk and serves them to the dashboard
SAP Bridge (optional)	5001	Connects to SAP systems for live record count automation

---

3. Setup & First Launch

Install Dependencies (once only)

```
python -m pip install flask flask-cors openpyxl
```

Start the Dashboard

1. Open PowerShell in the dashboard folder: cd C:\Users\KishorMarri\Documents\Sempra_DM_Dashboard_v1.0
2. Run the launcher: python launch_dashboard.py
3. Browser opens automatically at: http://localhost:5003/Sempra_CrossCycle_Summary_MASTER.html
4. Log in with your role credentials (see Section 5).

---

4. Data File Requirements

The dashboard reads two Excel files per migration cycle — a **Reference List** and an **Export/Import log**.

Default File Locations

```
C:\Users\<user>\.bob\DM1\ — DM1 Reference List + Export/Import file C:\Users\<user>\.bob\DM2\ — DM2 Reference List + Export/Import file C:\Users\<user>\.bob\DM3\ — DM3 Reference List + Export/Import file
```

File Requirements per Cycle

File Type	What it contains	Detected by filename
Reference List (REF)	Master list of all SAP tables expected to be migrated. Must have a table name column and a record count column.	ref, reference, master, tables, list
Export/Import Log (EXP)	SNP migration tool output showing which tables were exported and imported, with record counts	exp, imp, export, import, log, snp

Supported Column Names (auto-detected)

Data Point	Accepted Column Names
Table Name	TABLE_NAME, TABLE, OBJECT_NAME, NAME
Record Count	NUMBER OF RECORDS, RECORD_COUNT, COUNT, ROWS, VOLUME (20+ variants)
Source Count	SOURCE_COUNT, SOURCE, SRC_COUNT
Target Count	TARGET_COUNT, TARGET, TGT_COUNT
Type	TYPE, DIRECTION, MOVE_TYPE

---

5. User Roles & Login

Role	Username	Permissions
Admin	admin	Full access — upload, refresh, download, automation panel, manage paths
Manager	manager	View dashboards, download PDF reports, view RAG scorecards
Analyst	analyst	Upload files, view analysis, download CSV/Excel
Viewer	viewer	Read-only — view dashboards and charts only

---

6. Executive Summary Dashboard

Main page: **Sempra_CrossCycle_Summary_MASTER.html** — consolidated view across all three cycles.

Three Views

View	Audience	What it shows
■ Business View	Project Managers, Sponsors	RAG scorecards per cycle, headline metrics, record volumes, key insight boxes
■ Technical View	Data Migration Leads, Analysts	Table-level comparison, source vs target counts, export vs import gaps, drill-down
■ Performance View	Technical Team	Cross-cycle comparison charts, trend analysis, cycle-over-cycle improvement metrics

RAG Status Explained

Status	Meaning	Threshold
■ GREEN	Migration on track	≥ 95% match rate
■ AMBER	Minor gaps — attention needed	80–94% match rate
■ RED	Significant issues — action required	< 80% match rate
■ GREY	No data loaded yet	—

7. Cycle Dashboards (DM1 / DM2 / DM3)

Manual Upload Workflow

1. Click 'Upload Reference List' — select the REF Excel file for that cycle
2. Click 'Upload Export/Import File' — select the EXP/IMP Excel file
3. Dashboard automatically detects columns, parses data, and runs analysis
4. Results appear across four analysis sets

Four Analysis Sets

Set	What it shows
Set 1 — In Reference	Tables in Reference List AND with migration data. Shows EXP vs IMP count comparison.
Set 2 — Not in Reference	Tables found in EXP/IMP file NOT in the Reference List. Unexpected tables — needs investigation.
Set 3 — Missing from Migration	Tables in Reference List with NO export or import data at all. Never migrated.
Set 4 — Count Mismatches	Tables where Export count ≠ Import count. Data loss or duplication during migration.

8. Auto-Load from Shared Folder

Instead of manually uploading files each time, the Auto-Load Panel lets the bridge automatically pick up the latest files from a folder on your machine or a network share.

How to Use

1. Click 'Auto-Load' button in the cycle dashboard header
2. Enter the folder path where the REF file lives (e.g. C:\Files\DM1\ or \\server\share\DM1\)

3. Enter the folder path where the EXP file lives
4. Click 'Save Paths' — paths are remembered for future sessions
5. Click 'Scan for Latest Files' — bridge finds the most recently modified matching file
6. Click 'Load Both Files Now' — bridge streams both files directly into the dashboard

---

9. SAP Count Automation

The SAP Count Automation Panel (Admin only) connects to SAP source and target systems to automatically pull SE16N record counts — no manual Excel extraction needed.

Manual Process (before)	Automated (with SAP bridge)
Log into SAP manually for each system	Single credentials entry — bridge handles all connections
Run SE16N for hundreds of tables one by one	All tables queried in one batch run
Copy counts into Excel manually	Counts written directly to dashboard
30–60 minutes per cycle	5–10 minutes per cycle

---

10. Exporting Results

Export Type	What it contains	How to generate
■ CSV	Raw table data for any analysis set	Click CSV button next to each set header
■ Excel	Formatted multi-sheet workbook with all sets	Click Excel button — generates in browser
■■ PDF	Print-ready report of the current view	Click PDF or Ctrl+P
■ Full Export	All cycles, all sets in one Excel file	Available from Executive Summary dashboard

---

11. Troubleshooting

Bridge shows red dot / 'Bridge offline'

- Open terminal in dashboard folder
- Run: python automation/file_watcher_bridge.py
- Verify: Running on http://127.0.0.1:5002
- Reload the dashboard page

Dashboard shows blank / no data after upload

- Check the file has a Table Name column and a numeric count column
- Ensure the file is not open in Excel (~$filename.xlsx blocks reading)
- Try — the bridge reads the first sheet by default

'No file found' in Auto-Load scan

- Verify the folder path is correct and accessible
- Check file pattern — default is *.xlsx
- Ensure filename contains a keyword: ref / exp / imp / log

Data not refreshing after file update

- Click Refresh button or press Ctrl+Shift+R
- POST to http://localhost:5002/cache/clear to force bridge cache refresh

---

12. Quick Reference

Dashboard URLs

Page	URL
Executive Summary	http://localhost:5003/Sempra_CrossCycle_Summary_MASTER.html
DM1 Dashboard	http://localhost:5003/Sempra_DM1_Dashboard.html
DM2 Dashboard	http://localhost:5003/Sempra_DM2_Dashboard.html
DM3 Dashboard	http://localhost:5003/Sempra_DM3_Dashboard.html
Bridge Health Check	http://localhost:5002/ping
File Status	http://localhost:5002/paths

Current Data Files on C: Drive

Cycle	File	Type
DM1	C:\Users\KishorMarri\.bob\DM1\Reflist_m1.xlsx	Reference List
DM1	C:\Users\KishorMarri\.bob\DM1\DM1_ES2-SQ1 Export-Import.xlsx	Export/Import
DM2	C:\Users\KishorMarri\.bob\DM2\DM2 REF.xlsx	Reference List
DM2	C:\Users\KishorMarri\.bob\DM2\EXPORT IMPORT_DM2.xlsx	Export/Import
DM3	C:\Users\KishorMarri\.bob\DM3\ref dm31.xlsx	Reference List
DM3	C:\Users\KishorMarri\.bob\DM3\DM3_EXPORT_IMPORT_LOG.xlsx	Export/Import
